

There is a new Sheriff in town...

We are proud to present our latest development on the JJ-CCR scene! **The XRC (X-tended Range Canister).**

The X-tended Range Canister will provide the experienced diver with a total runtime of nearly 6 hours. The canister is extended in length by 50mm and the stand is shortened with 50 mm so the overall length of the unit stays the same!

Observe that this canister will only be sold as an option and not as a complete rebreather. The canister comes complete with stand, handle and radial scrubber. All other parts from the original rebreather will fit directly on the XRC!

The radial scrubber included in the XRC package will carry 4kg of Sofnolime 797 providing a total runtime of up to 6 hours.

Available from February 2016
